YOUR LAB RESULTS OVERVIEW

Prepared For:

1stOptimal.com

Here's how **1st Optimal** is different. We blend functional health coaching and medicine to create a plan just for you. Our health coaching helps with eating, exercise, sleep, and stress, so you can make lasting changes that fit your health goals.

At the same time, our medical team use advanced tests and treatments, like hormone therapy and special medicines, made just for you. We work together to create a plan that gets the best results with the least amount of treatment, helping you feel your best so you can help others too.

5 THINGS TO KNOW

1

Unlike traditional medicine, which focuses on treating symptoms and illnesses, our approach is proactive and personalized, optimizing your health based on functional ranges.

2

Lab values outside the optimal range do not necessarily indicate disease but may suggest areas that could benefit from targeted support.

3

Your results serve as a guide to help optimize your biomarkers, prevent dysfunction, and enhance overall performance.

4

Our expert clinical team carefully reviews your labs to determine eligibility for therapies and recommend necessary interventions. Any key findings will be discussed in detail during your 1:1 consultation with your clinician or coach.

5

If a prescription is needed, it will be provided by a licensed clinician based on your individualized assessment.
